Learning Outcome: 01-05 Distinguish among the kinds of managerial skills and roles that managers perform.

113. What sets managers apart from other people in organizations? Using examples, show how managers can utilize the resources of the organization to efficiently and effectively achieve organizational goals.
(p. 5)

Managers are responsible for directly supervising the work of other groups (other managers and/or nonmanagerial employees) within an organization. They must use the resources of the organizations, including human resources, physical machinery, raw materials, information, skills and financial capital efficiently and effectively to accomplish organizational goals. Resources are used efficiently when managers minimize their use in production such that customers can afford to purchase the good or service. Resources are used effectively when they are put toward accomplishing an appropriate goal that results in producing goods and services that customers want to buy, thereby giving the organization a competitive advantage. An example of efficiency is when McDonalds develops an innovative deep fryer that uses 30% less oil and speeds up the cooking of French fries. An example of effectiveness is when McDonalds decided to expand its products to include breakfast food and hence increased the number of customers.

Learning Outcome: 01-01 Describe what management is; what managers do; and how managers use resources to achieve organizational goals.

114. Discuss how managers affect organizational performance.
(p. 5)

Organizations exist to provide goods and services that customers desire. Organizational performance is how efficiently and effectively managers use resources to satisfy customers and achieve organizational goals. Efficiency is a measure of how well resources are used to achieve a goal. Organizations increase their efficiency when managers reduce the amount of resources or time needed to produce a given amount of goods. A manager's responsibility is to ensure that an organization and its members perform all the activities that are needed to provide goods and services to customers as efficiently as possible. Effectiveness is a measure of the appropriateness of the goals selected by managers. Effectiveness is measured by the degree to which an organization has achieved its goals. Managers strive to make decisions that are both effective and efficient.

Learning Outcome: 01-01 Describe what management is; what managers do; and how managers use resources to achieve organizational goals.

115. Identify and describe the four essential managerial functions.
(p. 7-9)

The four functions of management are planning, organizing, leading, and controlling. Planning refers to the identification and the selection of appropriate goals and courses of action (strategy); organizing refers to the structuring of working relationships in a way that allows organizational members to work together to achieve organizational goals; leading refers to the articulation of a clear vision and the energizing and enabling of organizational members so that they understand the part they play in achieving organizational goals; and controlling refers to the evaluation of how well an organization is achieving its goals, and the engagement in actions to maintain or improve performance when standards are not met.

Jones - Chapter 01 #115*

Learning Outcome: 01-02 Distinguish among planning; organizing; leading; and controlling; and explain how managers abilities to handle each one affect organizational performance.

116. Identify and discuss the primary responsibilities of the three levels of management.
(p. 9-12)

The three levels of management are first-line managers, middle managers, and top managers. First-line managers are responsible for the daily supervision, training and performance appraisal of nonmanagerial employees. Middle managers are responsible for monitoring the forces in the task environment, finding the best way to use resources to achieve organizational goals and supervise first-line managers. Top managers monitor the threats and opportunities in the general environment, set the vision and mission, establish organizational goals, develop strategy to achieve the goals, decide how departments should interact, and monitor the performance of middle managers. They are accountable for the entire organization.

Learning Outcome: 01-03 Differentiate among the types and levels of management; and understand the responsibilities of managers at different levels in the organizational hierarchy.

117. Mintzberg described ten managerial roles that managers play within the organization. Identify these ten specific roles and give an example of each.
(p. 16-18 See Table 1.1)

1. Figurehead; 2. Leader; 3. Liaison; 4. Monitor; 5. Disseminator; 6. Spokesperson; 7. Entrepreneur; 8. Disturbance handler; 9. Resource allocator; and 10. Negotiator. Examples will vary. See the answer to question 125 for more detail.

Learning Outcome: 01-05 Distinguish among the kinds of managerial skills and roles that managers perform.

118. Mintzberg grouped ten major roles that managers play into three broad categories - interpersonal, informational, and decisional. Discuss one of these categories in detail including the specific roles found in this category.
(p. 16-18)

The first broad category is interpersonal roles. Interpersonal roles are those assumed to effectively coordinate organizational employees and provide direction and supervision. As a *figurehead*, the manager symbolizes an organization and what it seeks to achieve. As a *leader*, the manager encourages subordinates to perform through his or her power obtained from formal authority and personal behaviour. In the *liaison role*, managers coordinate activities of people inside and outside the organization. Informational roles are the second broad category. Informational roles are associated with the tasks necessary to obtain and transmit information. As a *monitor*, the manager analyzes information from internal and external environments. In the *disseminator role*, the manager transmits information to others in the organization to influence attitudes and behaviour. In the *spokesperson role*, a manager promotes the organization to positively influence the way people inside and outside the organization respond to it. Decisional roles, the last broad category, are associated with the methods managers use to plan strategy and use resources. In the *entrepreneurial role*, the manager decides which projects to initiate and how to invest resources. As a *disturbance handler*, a manager handles an unexpected event that threatens the organization. As a *resource allocator*, the manager decides how to allocate people and resources. In the *negotiator role*, a manager negotiates solutions between people and groups.

119. According to the text, the utilization of conceptual, human, and technical skills depends on the manager's position in the hierarchy. Discuss.
(p. 14
Figure 1.6)

As managers travel up the hierarchy, they engage in more planning and organizing functions which rely heavily on conceptual skills. Middle managers tend to use human skills to a greater degree than top management because they directly supervise and motivate first line managers, and are accountable to top managers. Middle managers are primarily responsible for coordinating resources to implement goals set by top managers, i.e., organizing and therefore must possess a balance of all three sets of skills, while first line managers utilize human and technical skills (specialized job-related knowledge) when they motivate and train nonmanagerial employees.

120. Identify and discuss three of the "human skills" that a good manager needs to possess. For each, give a realistic business example of how a manager could use each of these three skills.
(p. 15)

Human skills include:

1. understand (empathizing, valuing differences, sensitivity, listening)
2. altering (influencing people to change)
3. leading (motivating, challenging)
4. controlling the behaviours or other individuals and groups. Examples will vary.

121. Discuss some major changes in management practices today that have occurred as a result of globalization and new technology?
(p. 12-14)

The tasks and responsibilities of managers at different levels has been changing dramatically. Managers rely on restructuring, outsourcing, empowerment and self-managed teams. Globalization and technological changes have facilitated these major changes. Restructuring can involve flattening the organization through few hierarchical layers, or reducing the number of departments, the number or types of product lines, selling off parts of the business, closing plants or even deciding to outsource some of the functions within the organization. Often restructuring involves downsizing, or eliminating the jobs of large numbers of top, middle, or first-line managers and nonmanagerial employees. It promotes efficiency by reducing costs and allowing better use of remaining resources. However, restructuring can also reduce the morale and productivity while increasing the distrust of remaining workers. Most large for-profit organizations today employ 10% fewer managers than they did 10 years ago. The remaining middle managers have had to assume additional responsibilities. Top managers have become increasingly involved in deciding how to develop and manage organizational resources, previously the responsibility of middle management. **Outsourcing** involves contracting with another company, usually in a low-cost country abroad, to have it perform work that the organization previously performed itself, such as manufacturing, marketing, or customer service. Organizations can increase efficiency by saving money and increase effectiveness, by freeing up time to develop new products, by outsourcing. However, it also decreases employment and many struggle to find meaningful jobs. **Empowerment and Self-Managed Teams:** First-line managers typically supervise the employees engaged in producing goods and services. Many organizations have moved to empower their workers by expanding their tasks and responsibilities and create self-managed teams in which groups of employees who are given the responsibility for supervising their own activities and for monitoring the quality of the goods and service they provide. First-line managers act as coaches or mentors who provide advice and guidance and help teams find new ways to perform their tasks more efficiently. The tasks and responsibilities of managers at different levels has been changing rapidly as organizations try to increase their performance.
